

# Individual data history

## That's VEEAM@MOUNT10

VEEAM@MOUNT10 is based on Veeam Cloud Connect. This service helps customers implement current retention guidelines such as GFS or 3-2-1. The software automatically transmits the selected data to the SWISS FORT KNOX in the defined cycle and pre-encrypted.

The transmitted data is highly encrypted.  
The data history can be defined individually.

# Functions and advantages

## SWISS FORT KNOX I & II

The data will be encrypted and stored redundantly in the most secure data centres in Europe. The data is stored exclusively in Switzerland.

## Individual data history

The customer has a reserved volume of data available. The data storage or backups kept on file can be defined individually.

## Recovery and disaster option

Data can be easily restored at any time using the software client. Data can optionally be delivered to the client using a physical medium.

## MOUNT10 service operation centre

MOUNT10 checks the backup process daily and proactively reports irregularities. The SOC is at the client's disposal around the clock for any questions.

## End-to-end encryption

The data is encrypted locally on the client's AES 256-bit infrastructure before the data is transferred. Only the clients have insight into their data.

## Encryption Key

The encryption key is used to encrypt the data. Only the owner of the key can access the data. If lost, the data cannot be restored.
