

Our Product **MOUNT10 COMBO** provides a highly efficient and automatic way to backup your data. We provide a client software to you which can be flexibly configured to your needs. This client runs continuously in the background, creates regular backups of your selected data, encrypts and transfers the changes into our SWISS FORT KNOX.

The transferred data are highly encrypted and cannot be altered anymore (read-only). You can choose the duration of your data history to be 12 or 120 months. The chosen history is part of the service.

With MOUNT10 COMBO, you do not need to purchase any additional software, the backup-software is part of the service and is available for Windows, MAC or LINUX platforms.

## Concept

With the installation credentials, you'll receive from us, you can establish a connection to our storage platform in the SFK. You will be asked to create an Encryption-Key responsible for the encryption of your data. Without this Encryption-Key, recovery of your data will be impossible. Not even MOUNT10 can recreate or regenerate this key! As a next step, you chose the data you would like to be backed up, the frequency of the backups and the desired point in time to execute this process.

COMBO works like a local backup, but will transfer the encrypted data to SWISS FORT KNOX I and II, so your data is stored in 2 external locations, highly encrypted and secure in Switzerland.

## Functionalities and advantages

- **SWISS FORT KNOX I + II:** Encrypted & **redundant** storage in the most secure datacentres of Europe. Your data is exclusively stored in Switzerland, guaranteed!
- **Usual MOUNT10 service:** We check your backup on a daily basis & contact you if you exceed your selected data or we recognize an interrupt in the process.
- **Offsite backups:** With MOUNT10 COMBO, you send your backups directly to SWISS FORT KNOX.
- **Data History:** You choose between 12 or 120 month data history.
- **Simple:** With our software client, you can do it all, select your data, backup this selection and restore all your data when you need it.
- **End-to-End encryption:** Your data will be encrypted directly on your environment with AES 256-bit before it leaves your infrastructure. The encryption has no negative impact regarding the backup performance. No one else except you can read your data.
- **Read-Only, malware protection:** The transferred data are highly encrypted and cannot be altered anymore.
- **Recovery and disaster option:** A small or medium data volume can be restored easily over the internet through your client software. Optionally we offer an express delivery of your larger data volumes on external Hardware devices (USB/NAS).
- **Service Operation Center SOC:** A team of certified technicians is available for support, free of charge and 24/7.
- **Easy pricing:** Thanks to our transparent pricing you can keep control. We bill on the basis of your selected amount of data and the chosen history.
- **Seeding:** For larger initial backups, we send you an USB or NAS device to save time and bandwidth. So, as of day one, only the changes of your data need to be transferred over the internet to save you expensive Internet upload bandwidth.
